2017

**Jawapan-Jawapan Pertanyaan Jawab
Lisan Harian Yang Tidak Dapat Dijawab
Dalam Dewan Rakyat Daripada
Kementerian**

HARI SELASA : 31 OKTOBER 2017

1911

1. The first part of the report deals with the general principles of the theory of the atom. It is shown that the atom is not a solid body, but a system of particles. The particles are arranged in a regular lattice, and the forces between them are of the Coulomb type. The energy of the atom is a function of the positions of the particles, and the equilibrium positions are determined by the condition that the energy is a minimum. The theory of the atom is thus reduced to the theory of a system of particles.
